

# Active Data Management and Information Network

You've never seen a classroom management system like ADMIN, especially the power it places in the hands of teachers. Three incredibly powerful tools enable teachers to do more than ever before. You asked for **Flexibility, Convenience** and **Accountability**...and **ADMIN delivers on all three!**

## Flexibility

### Content Insertion Manager

ADMIN's intuitive content insertion tool enables teachers to customize the multimedia curriculum to meet the needs of their students with complete flexibility. We know that most teachers will not be experienced in creating multimedia curriculum, so we developed an intuitive content insertion interface which guides you through each step of the process. If you can create a Word document or take digital photos you are ready to produce your own customized multimedia content.

“Paxton/Patterson is interested in what I want to do and has created a system with ADMIN that allows me to modify the curriculum for my specific needs. While some companies are locking down the curriculum and making it impossible to change Paxton/Patterson has done the opposite and made the system even more flexible.”

#### Russell Barnell

Technology Teacher, Washburn Rural Middle School  
Topeka, KS

# Convenience

## Remote Grading Manager

**Quick and accurate performance based assessment** is brought to the lab floor using the ADMIN Remote Grading Manager (RGM). Our unique Palm based grading tool equips the instructor with the ability to electronically grade students right from the student workstation. The RGM is **rubric based and easily modified** to accommodate instructor customized activities. The system is pre-loaded with hundreds of rubrics for hands-on activities and literacy assignments. All rubrics can be edited to suit individual school and district requirements. These rubrics allow the teacher to authentically assess each student and produce valid, reliable data.

**“ Using Paxton’s Remote Grading Manager saves me lots of time and it demonstrates to students an excellent 21st Century application of Information Technology. The pre-loaded rubrics can be modified whenever I believe that a change is needed - and the elimination of paper contributes to my “Green Lab” mission. ”**

**Larry Kendall**  
Sitting Bull Middle School  
Apple Valley, CA

# Accountability

## Standards Correlation Manager

If you are concerned about correlating student achievement to standards then ADMIN is the tool you need. The real question is “How can you demonstrate that the student is mastering the material called for in the standards?” That’s what is important. The only way that can occur is through testing and authentic assessment tied directly to specific standards.

**With ADMIN, teachers can demonstrate:**

- The frequency in which standards are encountered in each Integrated Instructional Unit
- Quantifiable scores on how students mastered individual standards based on daily progress and post testing
- Performance based assessments using electronic rubrics
